The invention concerns a product, containing 1,8-cineole, menthol and methyl salicylate, for controlling a plant pest population and solves the problem of insects infesting the crop.

The aim of the invention is to repel the insects by repelling them with a non-toxic repelling composition.

Document D1 is considered to represent the closest prior art. D1 describes a product, containing 1,8-cineole and methyl salicylate that has repellent effect on thrips.

The invention according to claim 1 differs from the product in D1 in that it also contains menthol.

Consequently, with the background of D1, the problem is to develop an alternative composition which, in addition to the two repellent compounds, contains an additional repellent compound.

A solution to this problem is known from document D2, which describes a product for inhibiting settling of aphids. Oils containing menthol, such as peppermint oil, have especially high activity.

Continuation of: Box V

It is therefore considered to be obvious for a person skilled in the art to use the teachings of D1 together with prior-art as specified in D2 in order to achieve an alternative composition according to the claimed invention.

No unexpected effect of the claimed composition, compared to known compositions or the individual compounds, has been shown.

Accordingly, the composition and method as claimed in claims 1 and 7 lack an inventive step.

The remaining claims are considered to involve particular detail executions obvious to a person skilled in the art. Therefore, the invention according to these claims is not considered to involve an inventive step.

Thus, the invention as specified in claims 1-15 are considered to have novelty and industrial applicability, but to lack inventive step.

D3 and D4 show that it is known to combine repellent compounds or oils into a composition.
